

Re-using a spoon
to taste food

Flies over the
garbage pail

Food stored next to
cleaning supplies

Food packages left open

Spoiled food in the cupboard

Milk sitting on the counter

Sneezing or coughing on food

Raw chicken dripping on the counter and into the drawer

Cat in the kitchen

Questions for Doctor Sal Monella

Why do I have to be so careful about touching raw meat, fish, and poultry?

Bad germs can grow in the “guts” of animals (and of people, too!). Cooking kills the germs and makes meat, poultry, and fish safe to eat. But, you’ll need to wash the germs off your hands, cutting boards, refrigerator door handle, and anything else you touched with dirty hands.

Who is more likely to get sick from unsafe food?

- These people are at risk:
- Pregnant women
 - Infants and young children
 - Older adults
 - People with serious illnesses such as cancer and HIV/AIDS

Why should I keep my pets out of the kitchen?

Pets can bring in germs. If your cat walks on kitchen counters, wash the counters before you fix food.

Why do I have to store foods at the right temperature?

Germs like to grow when the temperature is nice and mild. Don’t leave leftovers (such as meat, vegetables, chili beans, and pasta salad) on the table or counter longer than 2 to 3 hours. Keep hot foods **HOT** and cold foods **COLD** to stop germs.
